Appendices

- Appendix A: all findings 14
- Appendix B: message headers 14
- Appendix C: glossary 16

Part A: Executive summary

For leaders, managers and non-technical staff. Plain language.

Summary for leaders and non-technical staff

Plain language, no technical background needed.

High risk. This email looks like a scam.
Don't click its links, don't open its files and don't reply. You can delete it or report it.

Email subject	Bevestig je deelname & win een Efteling-cadeaukaart ???
Appears to be from	"Efteling Bezoekerspanel" <Efteling-Bezoekerspanel[@]??????????????????-client-58853181[.]????>
Date on the email	8 Jul 2026, 02:25 UTC
Overall rating	High risk (59 out of 100)
Type of attack	Password phishing
Attachments	None
Links	23 (1 dangerous)
Report prepared	2026-11-07

What happened

An email with the subject "Bevestig je deelname & win een Efteling-cadeaukaart ???" arrived from "Efteling Bezoekerspanel" <Efteling-Bezoekerspanel[@]??????????????????-client-58853181[.]????>. It was examined entirely on the analyst's computer: its sender details, its links, its attachments and the way it was delivered.

It looks like password phishing (medium confidence): It wants you to sign in on a fake page or type your password.

The main reasons

- A link says one website but really goes to another.
- If you reply, your answer goes to no-reply@team-efteling.nl, not to the address it came from.

Why it matters to the organisation

Risk	What could happen	Level
Stolen passwords	Someone who enters a password on the fake page hands attackers the account. From there they can read mail and files, send more phishing from a trusted address and reach other systems.	High
Privacy	The email contains 41 hidden tracking pixels. When the email is opened, the sender learns it was read and roughly where.	Low

What to do now

Everyone

- Do not click links, open attachments, scan QR codes or reply to this email.
- Do not forward it to colleagues. Report it using the steps below, then delete it.
- If you are unsure whether it is genuine, contact the supposed sender using a phone number or website you already know, never the details in the email.

If someone already clicked, opened a file, replied or typed a password

- Tell the IT or security team immediately. Speed matters more than embarrassment.
- Change the password for that account, and for any other account that uses the same password, from a different device.
- If a file was opened, disconnect the computer from the network and wait for IT before using it again.
- If money was sent or bank details were shared, call the bank at once and ask for the payment to be recalled.

For the IT and security team

- Block the sender, the domains and the links listed in the technical part, and search every mailbox for the same email.
- Remove copies from all mailboxes that received it.
- For anyone who interacted with it: reset passwords, sign them out everywhere, review app approvals and check for new mailbox rules or forwarding.

Who to tell

- Your internal IT or security team (first, always).
- Anti-Phishing Working Group (APWG): reportphishing@apwg.org
- Netcraft: scam@netcraft.com, for takedown of the fake sites
- Google Safe Browsing: https://safebrowsing.google.com/safebrowsing/report_phish/
- United States: https://reportfraud.ftc.gov and https://www.ic3.gov
- United Kingdom: report@phishing.gov.uk (NCSC)
- India: https://cybercrime.gov.in and incident@cert-in.org.in (CERT-In)
- Elsewhere: your national CERT or cybercrime reporting centre. Serious losses should also be reported to the police and the bank.

Unmask never sends anything by itself. Every report above is something a person chooses to send.

How sure are we?

High. Several independent signals agree, so this conclusion is strong.

Things the automatic checks could not look at:

- 23 links were checked by address only. What the page does is unknown until you run a sandbox scan from the Links tab.
- Remote images were not loaded, so text inside them wasn't read.

Part B: Technical analysis

For security analysts, incident responders and investigators.

Case information

For security analysts, incident responders and investigators.

Case ID	UNM-20261107-B2F26F25
Prepared by	Unmask (example report)
Organisation	Built from a public phishing sample
Classification (TLP)	CLEAR
Generated	2026-11-07 12:00:00 UTC
Tool	Unmask (https://github.com/praneeth132006/Unmask) 0.5.0
Where analysis ran	On the analyst's own computer, inside the browser. The email and its files were not sent to the tool's author or to any server. Online lookups (if any, listed below) were started by the analyst and sent only a hash, a domain name or a link.
Original message (.eml) SHA-256	90d93fe6f16552e5ddb9b24e57557f75f9fd1af0f087c3ffa27b05d2f8531602
Original message size	37,217 bytes
Analyst notes	Example report built from a real phishing email in the public phishing_pot research collection (github.com/rf-peixoto/phishing_pot). The original email is not redistributed; indicators are defanged.

Chain of custody: record who handled the original message and when. The hash above identifies the exact evidence analysed.

Verdict and scoring

High risk: risk score 59/100

Assessment: Password phishing (medium).

Category	Findings	Points
links	2	36
sender	2	15
auth	2	8
content	1	0
privacy	1	0

Attack type	Confidence	Meaning	Evidence (finding ids)
Password phishing	medium	It wants you to sign in on a fake page or type your password.	link-text-mismatch

Scoring: findings add points by severity (critical 35-40, high about 20, medium about 10, low about 4); reassuring signals subtract. 20

and above is Suspicious, 50 and above is High risk.

Message and sender analysis

Subject	Bevestig je deelname & win een Efteling-cadeaukaart ???
From (display name / address)	Efteling Bezoekerspanel / Efteling-Bezoekerspanel[@]??????????????????-client-58853181[.]????

Reply-To	no-reply[@]team-efteling[.]nl
Return-Path	info[@]hificlub[.]info
To	phishing[@]pot
Date	8 Jul 2026, 02:25 UTC (header: 2026-07-08T02:25:10.000Z)
Message-ID	<6033f7aa-7a7d-40b5-a249-fd39d02e2c92@BL6PEPF0001AB58.namprd02.prod.outlook.com>
Sender domain	??????????????????-client-58853181[.]????

Severity	Finding
MEDIUM	Replies go to a different address - If you hit Reply, your answer goes to no-reply@team-efteling.nl instead of Efteling-Bezoekerspanel@??????????????????-client-58853181.????.
LOW	Bounce address is on a different domain - Return-Path is info@hificlub.info. Normal for newsletters sent through mailing services.

Authentication (SPF, DKIM, DMARC, ARC)

Check	Result	Domain	Meaning
SPF	none	-	Was the sending server allowed to send for this domain?
DKIM	none	-	Is there a valid cryptographic signature from the domain?
DMARC	none	-	Does the visible From domain match what SPF or DKIM verified?

Provider verdict from =?utf-8?B?c3BmPXRlbXBlcnJvciAoc2VuZGVyIElQIGIzIDUuMTk2LjIwMS4xMjUpIHNt?=. Unmask also re-checks DKIM body hashes locally.

Severity	Finding
LOW	No SPF protection for the sending domain
LOW	Email is not DKIM-signed

Defanged values replace "." with "[.]" and "http" with "hxxp" so they cannot be clicked by accident. The STIX and JSON exports carry the exact values for tools.

Detection and hunting suggestions

Queries contain real values for pasting into your tools. Do not open them in a browser.

# Google Workspace / Gmail search (Admin console email log search or Vault)
from:(???????????????-client-58853181.????)
rfc822msgid:6033f7aa-7a7d-40b5-a249-fd39d02e2c92@BL6PEPF0001AB58.namprd02.prod.outlook.com
```

- Add the sender, Reply-To and the domains above to your mail gateway block list.
- Add the URLs and domains to web proxy and DNS filtering.
- Add the file hashes to endpoint protection block lists.
- Search mail logs for other messages with the same sender infrastructure, subject pattern or Message-ID domain.

Containment and remediation checklist

- [ ] Preserve the original message (.eml) and this report before deleting anything.
- [ ] Identify every recipient (mail logs) and who clicked or opened attachments (proxy, DNS and endpoint logs).
- [ ] Purge the message from all mailboxes and quarantine matching ones.
- [ ] Block the sender, domains, URLs and hashes listed above.
- [ ] For affected users: reset passwords, revoke sessions and refresh tokens, review OAuth app consents, MFA methods, mailbox rules, forwarding and delegates.
- [ ] Report externally (APWG, Netcraft, national CERT) and notify any impersonated brand.
- [ ] Run a short awareness note to staff with the key signs from this email.
- [ ] Record the outcome and close the case.

Method, limits and references

What was checked

- Sender identity, header consistency and authentication (SPF, DKIM, DMARC, ARC), including a local DKIM body-hash re-check.
- Delivery path and timing from Received headers.
- Links: real destinations, lookalike domains, redirects, hosting services, QR codes.
- Body: hidden text, obfuscation, urgency and payment language, tracking pixels.
- Attachments: file type by content, structure of PDFs, Office files, RTF and archives, macros, embedded files, links and indicators, hashes.

Not checked

- 23 links were checked by address only. What the page does is unknown until you run a sandbox scan from the Links tab.
- Remote images were not loaded, so text inside them wasn't read.

References and credits

- File analysis follows the ideas of Didier Stevens' pdfid.py, pdf-parser.py, oledump.py, rtfdump.py and zipdump.py (https://github.com/DidierStevens/DidierStevensSuite), reimplemented in TypeScript for the browser. Source code was not copied.
- MITRE ATT&CK: https://attack.mitre.org/
- SPF RFC 7208, DKIM RFC 6376, DMARC RFC 7489, ARC RFC 8617.
- Anti-Phishing Working Group: https://apwg.org/ - Netcraft: https://www.netcraft.com/
- Traffic Light Protocol: https://www.first.org/tlp/

Automated analysis supports, but does not replace, human judgement. Unknown or "no record" results never mean a file or link is safe.

Appendices

Reference material.

Appendix A: all findings

Severity	Points	Category	Finding
HIGH	25	links	Link text shows one website but goes to another - shows www.efteling.com, really goes to emailservicesnetau.com
MEDIUM	12	sender	Replies go to a different address - If you hit Reply, your answer goes to no-reply@team-efteling.nl instead of Efteling-Bezoekerspanel@??????????????-client-58853181.????.
LOW	11	links	Link is not encrypted (http://) (23 links) - emailservicesnetau.com
LOW	4	auth	No SPF protection for the sending domain
LOW	4	auth	Email is not DKIM-signed
LOW	3	sender	Bounce address is on a different domain - Return-Path is info@hificlub.info. Normal for newsletters sent through mailing services.
INFO	0	content	5 hidden text blocks (193 characters) - Short hidden text is often just an inbox preview line.
INFO	0	privacy	41 tracking pixels - Loading images tells the sender that and when you opened the email (in Gmail, through Google's image proxy, without your IP address). Unmask's safe view and Peek never load them.

Appendix B: message headers

Raw header text as received. It is plain text, not defanged and not clickable.

Appendix C: glossary

Term	Meaning
SPF	A list published by a domain of the servers allowed to send its email.
DKIM	A digital signature added by the sending domain, proving the message was not changed.
DMARC	A policy tying SPF and DKIM to the visible From address.
ARC	A record that preserves authentication results when email is forwarded.
IOC	Indicator of compromise: a fact (address, domain, hash) that identifies an attack.
Hash (SHA-256)	A fingerprint of a file. The same file always has the same hash; sharing it reveals nothing about the content.
Entropy	How random a file's bytes look. Near 8 suggests encrypted or packed data.
Macro	A small program inside an Office file that can run when you click Enable Content.
Defanged	Rewritten (hxxp, [.]) so a link or address cannot be clicked by accident.
TLP	Traffic Light Protocol: how widely the report may be shared (CLEAR, GREEN, AMBER, RED).
